Contents

List of Abbreviations.....vii
List of Contributors.....xi
Preface.....xiii

Chapter 1 **A Socio-Technical Approach to Cyber Risk Management and Impact Assessment** 1
Konstantinia Charitoudi, Andrew Blyth

Chapter 2 **Externalities and the Magnitude of Cyber Security Underinvestment by Private Sector Firms: A Modification of the Gordon-Loeb Model**..... 21
Lawrence A. Gordon, Martin P. Loeb, William Lucyshyn, Lei Zhou

Chapter 3 **Cyber Terrorism Framework** 33

Chapter 4 **A Conceptual Framework for Threat Assessment Based on Organization’s Information Security Policy** 47
Joseph Elias Mbowe, Irina Zlotnikova, Simon S. Msanjila, George S. Oreku

Chapter 5 **Clustering Methods for Replicated Criminal Websites** 67

Chapter 6 **Effect of Network Traffic on Ips Performance** 91
Shahriar Mohammadi, Vahid Allahvakil, Mojtaba Khaghani

Chapter 7 **Perception on Cyber Terrorism: A Focus Group Discussion Approach** 107
Rabiah Ahmad, Zahri Yunos, Shahrin Sahib, Mariana Yusoff

Chapter 8 **Web Security and Log Management: An Application Centric Perspective** 121
Andrew Mwaura Kahonge, William Okello-Odongo, Evans K. Miriti, Elisha Abade

Chapter 9 **Digital Forensics and Cyber Crime Datamining** 133
K. K. Sindhu, B. B. Meshram

Chapter 10	Resilience to Leaking Dynamic Systems Modeling of Information Security	145
	Kay Hamacher	
Chapter 11	Internet-Future Business Development Focus	161
	Xiang Fang, Yangping Zhou	
Chapter 12	Experimental Evaluation of Cisco Asa-5510 Intrusion Prevention System Against Denial of Service Attacks	169
	Raja Sekhar Reddy Gade, Sanjeev Kumar	
Chapter 13	Cyber-Physical Security of Wide-Area Monitoring, Protection and Control in a Smart Grid Environment	199
	Aditya Ashok,, Adam Hahn, Manimaran Govindarasu	
Chapter 14	IP Traceback through (Authenticated) Deterministic Flow Marking: An Empirical Evaluation	221
	Vahid Aghaei-Foroushani and A Nur Zincir-Heywood	
Chapter 15	Software Dysfunction: Why do Software Fail?	267
	Edward E. Ogheneovo	
	Citations.....	285
	Index.....	289

Cyber Security

Cyber security is the collection of policies, procedures, guidelines, risk management approaches, actions, training, best practices, assurance and technologies that can be used to protect the cyber environment and organization and user's assets. Organization and user's assets include connected computing devices, personnel, infrastructure, applications, services, telecommunications systems, and the totality of transmitted and/or stored information in the cyber environment. Cyber security strives to ensure the attainment and maintenance of the security properties of the organization and user's assets against relevant security risks in the cyber environment. This book has been divided into fifteen chapters. The first chapter reviews that the socio-technical system is used to describe the function and form that people, physical equipment, hardware and software, laws and regulations that accompany the organizations, data and procedures. Second chapter presents the GL model literature and modifying the GL model to incorporate externalities. Chapter three describes the application of mixed method in developing a cyber-terrorism framework. Chapter four shows that, the security breaches of information stored into ICT assets have remained difficult to solve the percent of major threats actions and associated potential assets been exploited. Clustering methods for replicated criminal websites is described in chapter five. Chapter six reviews that the intrusion detection and prevention system has become important tools in network security. This module can be categorized into two classes, Network IPS and Host IPS. Chapter seven shows a more holistic way in describing cyber terrorism is useful in understanding the concept of cyber terrorism. Chapter eight explains web application authentication levels, risks affecting web applications and vulnerability scenario of web security and log management. Digital forensics and cybercrime data mining is described in chapter nine. Chapter tenth shows the resilience to leaking dynamic systems modeling of information security. Chapter eleven focuses on internet future in the field of business development. Chapter twelve shows the experimental evaluation of cisco ASA-5510 intrusion prevention system against denial of service attacks. Cyber-physical security of wide-area monitoring, protection and control in a smart grid environment is presented in thirteenth chapter. An empirical evaluation of IP traceback through (authenticated) deterministic flow marking is presented in fourteenth chapter. Chapter fifteen reviews that software is one of the most important and yet one of the most economically challenging techniques of this era. A good software is a software that is usable, reliable, defect free, cost effective and maintainable.

Darren Samuels is an M.S in Computer Science. He is pursuing Ph.D. in Telecommunication and Networking. He has written several articles, research report, and papers on digital signal processing and innovative techniques in networking. His interest research areas are TCP/IP network, optical transport network, and selective switching and WDM.

Dr. Thomas Rohsenow is a Master of Science in Applied Science. He holds Ph.D. in Data Communications. He has published many articles and journals focused on the topics, data transmission, source coding, point-to-multipoint communication, and many more.
