Cybersecurity and Human Rights by distinguished authors from various perspectives on the limits of state and case law, including

controversy, the planned European Union data protection amendments, and the latest European Court of Human Rights jurisprudence, this book provides an analysis of the ongoing legal discourse on global cyberveillance.

Using examples from contemporary state practice, including content filtering and Internet shutdowns, the authors identify limits of state and third-party interference with human rights of Internet users. Analysis is based on existing human rights standards as enshrined within international law, including the Universal Declaration of Human Rights, International Covenant on Civil and Political Rights, European Convention on Human Rights, and recommendations from the Human Rights Council. The definition of human rights, perceived as freedoms and liberties guaranteed to every human being by international legal consensus, is presented based on the rich body of international law.

This book is designed as a reference source for early twenty-first-century information policies and the future of Internet governance and will be useful to scholars in the information studies fields, including computer, information, and library science. It is also aimed at scholars in the fields of international law, international relations, diplomacy studies, and political science.

JOANNA KULESZA is assistant professor in the Department of International Law and International Relations, Faculty of Law and Administration, University of Lodz, Poland. She has been a visiting lecturer with the Oxford Internet Institute, Norwegian Research Center for Computers and Law, Westfälische Wilhelms Universität Münster, and Justus-Liebig-Universität Gießen. She is author of four books on international and Internet law and more than thirty peer-reviewed papers. She just concluded her work on a book about the due diligence principle in international law.

ROY BALLESTE is professor of law and law library director at St. Thomas University in Miami Gardens, Florida, where he also teaches Internet governance at the School of Law. He is a member of the Global Internet Governance Academic Network and a member and active participant in the Noncommercial Users Stakeholder Group of the Internet Corporation for Assigned Names and Numbers.
